

MB@CAMERA

■ **MOBILE VIDEO SURVEILLANCE**

Medi@Base
Project Engineering

DESCRIPTION

MB@CAMERA is the innovative technology for remote video surveillance, monitoring and interaction. The system integrates in a single unit all the features you need as it allows to:

- have a remote video surveillance for both security and operating purposes;
- control all the system parameters;
- take control over the system.

All without any need of wiring.

MB@CAMERA is the first system that provides all these features on your UMTS mobile or palm.

APPLICATIONS

MB@CAMERA is successfully applied in:

- small **WWTP** control: eliminating the need for a resident supervisor;
- maintenance planning for **WWTP**: as the maintenance engineers can evaluate the problem before arriving on site and plan the intervention based on its urgency. Typically these interventions are eliminated:

- * **visit to site based on a scheduling;**
- * **visit to site based on alarms;**
- * **interventions without proper tools or spares.**

- monitoring of plants and buildings by security crew directly on their palm or mobile;
- remote video surveillance of vehicles like:

- * **household waste collection;**
- * **septage tank trucks.**
